

CLAIMS

What is claimed is:

1. A tonneau system for a cargo box of a vehicle, said tonneau system comprising:

a support frame having a side rail and a front rail;

a cover spanning said support frame; and

an adjustment limit extending from one of said side rail and said front rail and engaging the other of said side rail and said front rail, said adjustment limit limiting fore and aft movement of said front rail relative to said side rail to a predetermined range.

2. The tonneau system according to Claim 1 wherein said adjustment limit comprises:

a bolt member downwardly extending from said front rail;

an aperture formed in said side rail, said aperture sized to receive said bolt member therein and permit said fore and aft movement.

3. A tonneau system for a cargo box of a vehicle, said tonneau system comprising:

a support frame having a side rail and a front rail;

a cover spanning said support frame;

an adjustment limit extending from one of said side rail and said front rail; and

a slot formed in the other of said side rail and said front rail, said slot being sized to receive said adjustment limit and permit only a predetermined range of fore and aft movement of said front rail relative to said side rail.

4. The tonneau system according to Claim 3 wherein said adjustment limit comprises:

a bolt member downwardly extending from said front rail.
